MATERIAL JOB COSTING

# Material Job Costing

## Address All Your Company's Material Job Costing Complications With A Single Customized Solution

The Material Job Costing (MJC) product allows project based companies to execute job costing for both long term and/or short term projects with greater efficiency, performance and expertise. Any transaction generated in NetSuite can be tracked against a project, and reported against a specific job cost category. Some sample transaction types include: time, purchases, material, manufacturing, work in process, and invoicing. Material Job Costing reporting is available at the individual project level as well as projects that require a rollup to the parent-level project.

...

### X Key Business Functions

- Tracking of material and project costs inclusive of work in process (WIP)
- Reporting to track projects, project job costing and overall project profitability and performance
- Leverage customer defined material job costing categories
- Material job costing budgets available at the project and project periodic level

### X Benefits Of Use

- Streamlined operations with no significant additional processes to minimize impact on the existing NetSuite platform
- Eliminate manual reporting spreadsheets by using data that is updated daily and/or in real-time per project
- Flexible design that permits creation of project costing models that leverage standard NetSuite transactions

### X Typical Company Profile

- Project based Manufacturers
- Consulting and service firms
- Industrial and Construction companies
