

# Construction Management

## Fulfill All Your Company's ERP Business Construction Needs With One Custom Solution

At appficiency we recognize that organizations face many challenges in moving from one stage of growth to the next, so we've created the first comprehensive construction ERP solution on the NetSuite platform. This solution is a single product that can manage all your jobs, organizing your labour and materials, bids and receivables, project management, and accounting and earned revenue. This unique BFN Netsuite construction management solution is the answer to your industry ERP needs.

### X Key Business Functions

- Project reporting - per project and project hierarchy, across segments/locations, and project types
- Real time project costing across customer defined cost categories and revenue models
- Daily project logs, task completion, and billing progress
- Material purchasing, distribution and site-level material management
- Change order management supported by multiple estimates
- Holdback/retainer for customer or vendor retainage
- Revenue management through customer defined percent complete calculation
- Request for quote (RFQ) subcontractor bid process support

### X Benefits Of Use

- One system to manage and visualize all aspects of your business (from estimating to project management to billing)
- Ease of managing complex billing and cost based revenue recognition processes
- Support of complex estimates for any item's unit of measure (eg: sq ft)
- Leverage mobile tools where possible (time capture)
- Simplified processes for project and financial based reporting
- Monthly project budgeting and analysis down to the day

### X Typical Company Profile

- Contractors: residential, institutional, and commercial building
- Multiple construction business landscapes: specialized industrial, infrastructure, engineering and trade focused subcontractors
- Land and real estate development
- Design, architecture, and engineering companies
